

This is how to reprogram the switch for the desired position indicator.

1. Turn key on
2. press both buttons (blinking 0)
3. press the up button to position 1 and before the . goes out press both buttons and go back to blinking 0
4. wait for the . to go out on blinking 0 and repeat the procedure until the display is blank. Must be completed successfully 5 times in a row. (the display will blank out when successful)
5. press the up button to the new last position number
6. wait for the chip to recycle back to position 1
7. test
